

IT USER GUIDE MANUAL

Phase 08: Documentation

Professional End-User Reference

Document ID: P07-DOC-UG-001 | Version: 1.0 | Owner: IT Support Team | Classification: Internal Use

Purpose:

Provide clear, safe, step-by-step guidance for employees performing common workplace IT tasks.

1. Using This Manual

These guides are intended for routine end-user actions. Follow the steps in order. If a step requires administrative privileges, exposes sensitive information, or differs from your organization's approved process, stop and contact IT Support.

2. General User Responsibilities

- Protect company accounts, passwords, authentication codes, and devices.
- Use only approved applications, networks, storage locations, and collaboration services.
- Report suspicious activity, lost devices, or suspected account compromise promptly.
- Do not install unauthorized software or bypass security controls.
- Provide accurate information when contacting IT Support.
- Never place passwords, MFA codes, private keys, or confidential data in screenshots or support tickets.

1. Guide 01: Password and Account Security

Purpose

Help users maintain secure access to company systems.

Steps

1. Use the approved sign-in page or application.
2. Create a unique password that meets the organization's requirements.
3. Enable and use approved multi-factor authentication.
4. Never share your password or authentication code with another person.
5. Use the approved password-reset process if you forget your password.
6. Contact IT Support if you suspect unauthorized account activity.

Do Not

- Reuse a corporate password on unrelated services.
- Send passwords through email or chat.
- Approve unexpected MFA requests.

- Store credentials in unapproved documents.

2. Guide 02: Connecting to the Corporate Network

Steps

1. Open the device's network settings.
2. Select the approved corporate wired or wireless network.
3. Authenticate using your assigned credentials or approved authentication method.
4. Confirm that the device receives network connectivity.
5. Open an approved internal service to verify access.
6. If connection fails, record the exact error and contact IT Support.

Quick Checks

- Check airplane mode.
- Check Ethernet cable or Wi-Fi state.
- Move closer to an approved wireless access point when appropriate.
- Do not connect to unknown networks merely to bypass a corporate connectivity issue.

1. Guide 03: Requesting IT Support

What to Include

- Your name and department.
- Device or application affected.
- Exact problem and when it started.
- Exact error message, if available.
- Business impact and urgency.
- Steps already attempted.
- Approved screenshot or evidence with sensitive information removed.

Support Request Steps

1. Open the approved support portal or contact method.
2. Create the request with a clear subject.
3. Describe the symptom rather than only saying that something 'doesn't work'.
4. Attach sanitized evidence if helpful.
5. Record the ticket/reference number.

6. Guide 04: Safe File Handling

1. Store work documents only in approved company locations.
2. Confirm the recipient before sharing a document.
3. Use approved sharing permissions and expiration settings when available.
4. Do not download unexpected attachments or executables.
5. Report suspicious files or links to IT Support.
6. Delete or archive files according to company retention requirements.

Sensitive Data

Do not send confidential information to personal email, personal cloud storage, unauthorized messaging applications, or external recipients without approval.

1. Guide 05: Basic Workstation Troubleshooting

1. Save your work.
2. Check power and visible cable connections.
3. Check network connectivity.
4. Close and reopen the affected application.
5. Check whether other applications work normally.
6. Restart the workstation when appropriate and when instructed by policy.
7. Retry the affected task.
8. Contact IT Support if the issue continues.

When to Stop

- Repeated crashes
- Unexpected security warnings
- Suspected malware
- Possible hardware damage
- Data-loss symptoms
- Requests for administrative changes

1. Guide 06: Remote Support Session

1. Confirm that you requested or approved of the support session.
2. Close unrelated confidential documents.
3. Save your work.
4. Follow the technician's approved connection instructions.
5. Remain available during the session if requested.
6. Never disclose your password or MFA code.
7. Review the result with the technician.
8. Confirm that the remote session has ended.

9. Guide 07: Email and Calendar Troubleshooting

1. Check whether the network is working.
2. Confirm you are signed into the correct company account.
3. Check the exact error message.
4. Try the approved web and/or desktop interface if available.
5. Check whether the issue affects sending, receiving, or calendar synchronization.
6. Contact IT Support if the problem persists.

Security

- Do not open suspicious attachments to 'test' them.
- Do not forward suspicious messages outside approved reporting procedures.
- Report unexpected password-reset or MFA messages.

1. Guide 08: Printing

1. Confirm the correct printer is selected.
2. Check that the printer is powered on.
3. Check for visible paper or hardware alerts.
4. Cancel a stuck local print job if appropriate.
5. Retry with a small test document.
6. Contact IT Support if the printer remains unavailable.

7. Guide 09: Remote Access

Use this guide only for company-approved remote access such as VPN or an approved remote-support service.

1. Connect to the approved remote-access service.
2. Authenticate using the approved method.
3. Confirm the connection status.
4. Open the required approved resources.
5. Disconnect when work is complete.
6. Contact IT Support if authentication or connectivity fails.

Never

- Disable endpoint security to connect.
- Use unauthorized remote-access software.
- Share remote-access credentials.
- Connect from an untrusted device when policy prohibits it.

1. Guide 10: Lost or Stolen Company Device

1. Report the loss or theft to IT Support/security immediately.
2. Provide the asset ID, device type, approximate time, and location if known.
3. Follow instructions for account/session protection.
4. Do not attempt unauthorized tracking or physical recovery.
5. Provide any additional information requested by the support/security team.
6. Keep the incident reference for follow-up.

Priority

Lost or stolen company equipment should be reported promptly because the device may provide access to corporate systems or business data.

1. Guide 11: Suspicious Email, Link, or File

1. Do not click further links or open suspicious attachments.
2. Do not enter credentials into an unexpected page.
3. Use the approved reporting mechanism.
4. Provide sender, subject, timestamp, and relevant evidence as requested.
5. Follow IT/security instructions regarding the message.
6. If credentials were entered, report that fact immediately.

7. Guide 12: Working With IT Support During Troubleshooting

1. Describe the problem accurately.
2. Follow only instructions provided through the approved support process.
3. Tell the technician if an action could interrupt business work.
4. Do not make additional configuration changes while troubleshooting unless instructed.
5. Test the result.
6. Confirm whether the issue is resolved or remains.

3. Quick Reference

Issue	First Action	Escalate When
Password problem	Use approved reset process	Account remains locked or compromise suspected
Network problem	Check connection and basic network status	Multiple users affected or infrastructure suspected
Application problem	Restart/retry and capture exact error	Repeated crash or data-loss concern
Access denied	Confirm resource and request	Authorization/privileged access required
Suspicious email	Do not interact further; report	Credentials entered or malware suspected
Lost device	Report immediately	Device may contain corporate data
Printer problem	Check printer selection/status	Hardware or shared-service issue
Remote access	Use approved method	Service/authentication/network failure

4. Privacy and Security Rules

- Never disclose passwords, MFA codes, private keys, or recovery codes.
- Do not allow unapproved remote access.
- Remove sensitive information from screenshots before sharing it in ordinary support channels.
- Use company-approved storage and communication systems.
- Report suspected compromise immediately.

5. Document Maintenance

The IT Support Team should review this manual annually and whenever supported applications, authentication methods, network access, security policies, or employee procedures materially change.

6. Revision History

Version	Date	Description	Owner
1.0	2026-08-10	Initial professional end-user guide manual for Phase 07.	IT Support Team
