

IT ASSET REGISTER & LIFECYCLE MANAGEMENT MANUAL

Phase 08: Documentation

Asset Inventory, Assignment, Control & Lifecycle

Document ID: P07-DOC-ASSET-001 | **Version:** 1.0 | **Owner:** IT Support / Asset Management | **Classification:** Internal Use

1. Purpose and Scope

This manual defines the controls and documentation requirements for company IT assets from acquisition through assignment, movement, repair, storage, reassignment, and retirement. It applies to managed hardware and other tracked technology equipment. Production asset data should be maintained in the approved asset-management repository.

2. Asset Management Principles

- Every managed asset must have a unique asset identifier.
- Asset records must identify the current custodian, location, status, and relevant hardware identifiers.
- Asset transfers must be recorded promptly.
- Physical assets should be reconciled against the register periodically.
- Sensitive credentials, recovery keys, passwords, and authentication secrets must never be stored in the asset register.
- Asset disposal must follow approved security and environmental requirements.

3. Asset Categories

Category	Examples
Computing	Laptop, desktop, workstation, thin client
Display	Monitor, projector
Network	Switch, router, firewall, wireless access point
Mobile	Company smartphone, tablet
Peripherals	Keyboard, mouse, headset, webcam, docking station
Storage	Approved external drive, removable storage
Printing	Printer, scanner, multifunction device
Infrastructure	Server, UPS, rack equipment
Other	Specialized approved IT equipment

4. Asset Register - Master Fields

Field	Description	Required
Asset ID	Unique internal identifier	Yes
Asset Type	Equipment category	Yes
Make/Model	Manufacturer and model	Yes
Serial Number	Manufacturer serial numbers where applicable	Yes
Hostname	Assigned system hostname where applicable	Conditional
Assigned To	Current custodian/user	Yes, when assigned
Department	Custodian department	Yes, when assigned
Location	Physical/site location	Yes
Status	Lifecycle status	Yes
Purchase Date	Acquisition date	If available
Warranty End	Warranty expiration	If available
Supplier	Approved supplier	If available
Cost/PO Reference	Controlled financial reference	According to policy
Last Verified	Date of latest physical/logical verification	Yes
Notes	Non-sensitive operational notes	Optional

5. Standard Asset Register Template

Asset ID	Type	Make/Model	Serial	Hostname	Assigned To	Department	Location	Status
AST-001	Laptop	[Model]	[Serial]	[Hostname]	[User]	[Dept]	[Location]	In Use
AST-002	Desktop	[Model]	[Serial]	[Hostname]	[User]	[Dept]	[Location]	In Use
AST-003	Monitor	[Model]	[Serial]	N/A	[User]	[Dept]	[Location]	In Stock
AST-004	Network Device	[Model]	[Serial]	[Hostname]	Network Team	IT	[Location]	Active

6. Asset Status Values

Status	Meaning
In Stock	Assets are available and not currently assigned.
Assigned / In Use	Assets are assigned to an approved user or service.
In Repair	Assets are temporarily unavailable for repair or diagnosis.
Pending Transfer	Approved movement or reassignment is in progress.
Pending Disposal	Assets are approved for retirement but not yet disposed.

Disposed	Assets have completed the approved disposal process.
Lost	Assets cannot currently be located and have been reported as missing.
Retired	Assets are no longer operationally supported but remain in historical records where required.

7. Asset Acquisition and Registration

1. Receive the approved acquisition or procurement information.
2. Confirm the equipment matches the approved order.
3. Assign a unique asset ID.
4. Record manufacturer, model, serial number, and other required identifiers.
5. Record purchase/warranty information where available.
6. Apply the approved asset label or identifier.
7. Record initial location and status.
8. Complete baseline configuration before assignment where required.

8. Asset Assignment

1. Confirm the employee or service assignment is approved.
2. Verify the asset ID and physical device.
3. Record assigned user, department, and location.
4. Record assignment date.
5. Confirm required accessories are included.
6. Obtain the required acknowledgement or handover record.
7. Set the asset status to Assigned/In Use.

9. Asset Transfer

1. Confirm the transfer request and receiving user/department.
2. Verify the asset identity and condition.
3. Record the old and new custodian.
4. Record the new location.
5. Update the asset register.
6. Obtain required acknowledgement.
7. Confirm that the receiving user has the correct equipment and accessories.

10. Asset Return

1. Receive the asset from the user.
2. Verify the asset ID and serial number.
3. Check physical condition and included accessories.
4. Record damage or missing components.
5. Remove the previous user assignment.
6. Update status to In Stock, In Repair, or another appropriate state.
7. Securely store the asset until the next approved lifecycle action.

11. Repair and Maintenance

Event	Required Record
Repair request	Asset ID, fault description, date, owner
Diagnostic	Observed fault and authorized diagnostic result
External repair	Supplier/service reference and dates
Replacement part	Part/action and approval where required
Return to service	Verification result and new status

- Do not expose confidential business data to unauthorized repair providers.
- Follow approved data-protection procedures before sending devices for repair.
- Record major repairs that affect asset conditions or lifecycle decisions.

12. Asset Reconciliation

Reconciliation compares the physical inventory and approved system records to identify missing, duplicated, incorrectly assigned, or obsolete assets.

1. Generate the current asset list.
2. Perform a physical or approved logical verification.
3. Match asset IDs and serial numbers.
4. Confirm assigned user and location.
5. Record discrepancies.
6. Investigate missing or incorrectly assigned assets.
7. Correct approved records.
8. Escalate unresolved discrepancies.

Reconciliation Result	Action
Matched	No corrective action required; update verification date.
Wrong User/Location	Confirm custodian and update record.
Missing Asset	Investigate and follow lost-asset procedure.
Duplicate Record	Validate identifiers and merge/correct records.
Unknown Asset	Identify ownership and register if required.
Obsolete Asset	Start retirement/disposal process.

13. Lost or Stolen Asset

1. Report the missing asset immediately through the approved process.
2. Record asset ID, assigned user, last known location, and time discovered.
3. Notify the appropriate IT/security contact.
4. Follow approved account/session protection procedures.
5. Update the asset status to Lost when appropriate.
6. Document investigation and final disposition.

If theft or potential data exposure is suspected, follow the organization's security incident process.

14. Secure Disposal and Retirement

1. Confirm the asset is approved for retirement/disposal.
 2. Verify the asset identity.
 3. Apply the approved data-erasure or media-destruction procedure.
 4. Remove the asset from active assignment.
 5. Record disposal date and method.
 6. Retain disposal evidence where required.
 7. Update the asset status to Disposed/Retired.
- Do not discard storage devices containing company data through ordinary waste channels.
 - Follow approved secure-erasure or physical-destruction requirements.
 - Preserve required financial, legal, warranty, and asset records.

15. Asset Lifecycle

Acquire → Register → Configure → Assign → Maintain → Transfer/Repair → Return → Reconcile → Retire/Dispose

Lifecycle Stage	Primary Record
Acquire	Purchase/order information
Register	Asset ID and hardware identifiers
Configure	Baseline and deployment record
Assign	Custodian/location/assignment date
Maintain	Repair and maintenance history
Transfer	New custodian/location
Return	Condition and returned accessories
Retire	Approval and retirement reason
Dispose	Method, date, and evidence

16. Asset Security Requirements

- Restrict access to detailed asset records to authorized personnel.
- Do not store passwords, private keys, recovery codes, or authentication secrets.
- Limit exposure of serial numbers and detailed infrastructure identifiers when not needed.
- Ensure lost devices are handled through the security process.

17. Asset Verification Checklist

Control	Complete
Unique asset ID assigned	☐
Serial number recorded	☐
Current custodian recorded	☐
Department recorded	☐
Location recorded	☐
Status current	☐

Accessories recorded where required	☐
Warranty/procurement information recorded where applicable	☐
Last verification date recorded	☐
Disposal evidence retained where applicable	☐

18. Asset Register Quality Standards

- No duplicate asset IDs.
- No unexplained blank mandatory fields.
- Status must reflect the actual lifecycle state.
- Custodian and location must be updated after transfer.
- Lost assets must have a corresponding incident/support record.
- Disposed assets must have an appropriate disposal record.

19. Document Maintenance

Review the asset register and this manual according to organizational policy. Perform periodic reconciliation and update the documentation after major procurement, transfer, repair, retirement, or disposal events.

20. Revision History

Version	Date	Description	Owner
1.0	2026-08-10	Initial professional IT asset register and lifecycle manual for Phase 07.	IT Support / Asset Management
