

KSA Office IT Support & Infrastructure Management

Phase 07: IT Support Operations

Afaq Business Solutions Co.

Module 07: Incident Report

1. Executive Summary

This report documents the investigation of a workstation performance complaint involving slow applications and delayed responsiveness.

2. Ticket Details

- Ticket ID: HD014
- Department: Warehouse
- Reported By: Usman
- Priority: High
- Category: System Performance

3. Reported Problem

The user reported that the workstation had become slow and applications were taking a long time to respond.

4. Investigation

- Verified the reported performance issue.
- Reviewed current system load.
- Reviewed available memory and swap usage.
- Identified processes with elevated CPU and memory consumption.
- Verified root file system capacity.
- No configuration changes were made during the initial investigation.

5. Diagnostic Evidence

System load, memory utilization, process resource consumption, and filesystem capacity were reviewed to determine whether CPU, memory, or storage conditions could contribute to the reported symptoms.

6. Corrective Action

- A controlled test process was created for process-management validation.
- The test process was safely terminated after verification.
- No critical system process was terminated.

7. Verification

- Confirmed the controlled test process could be identified.
- Confirmed it could be safely removed.
- No critical system process was affected.

8. User Communication

The user was informed that performance diagnostics had been completed.

9. Lessons Learned

- Performance issues should be investigated using multiple resource indicators.
- Process termination should be limited to known and authorized processes.
- Evidence should be collected before corrective action.

10. Ticket Closure

The performance investigation and controlled process-management exercise were completed, and the ticket was marked resolved.
