

KSA Office IT Support & Infrastructure Management

Phase 07: IT Support Operations

Afaq Business Solutions Co.

Module 05: Incident Report

1. Executive Summary

This report documents the investigation of a workstation network connectivity complaint and verification of local network and DNS functionality.

2. Ticket Details

- Ticket ID: HD012
- Department: Sales
- Reported By: Ali
- Priority: High
- Category: Network Connectivity

3. Reported Problem

The user reported being unable to access the company website while the workstation appeared connected to the network.

4. Investigation

- Verified network interface status.
- Confirmed the default network route.
- Tested external IP connectivity.
- Tested DNS name resolution.
- No local network configuration changes were required.

5. Diagnostic Findings

The diagnostic checks confirmed that the workstation had an operational network connection and could communicate with external network resources. DNS resolution was also successfully tested.

6. Resolution

- Network connectivity verified.
- DNS resolution verified.
- User informed us that the local workstation network connection was operational.
- Ticket marked as resolved.

7. User Communication

The user was informed of the diagnostic findings and advised that the local workstation network connection was operational.

8. Lessons Learned

- Use layered diagnostics to distinguish connectivity and DNS problems.
- Collect evidence before making configuration changes.
- Document findings clearly for escalation when required.

9. Ticket Closure

The incident was resolved after successful network and DNS verification.
