

KSA Office IT Support & Infrastructure Management

Phase 07: IT Support Operations

Afaq Business Solutions Co.

Module 06: Incident Report

1. Executive Summary

This report documents the investigation and resolution of an application error affecting report generation in the Operations department.

2. Ticket Details

- Ticket ID: HD013
- Department: Operations
- Reported By: Hassan
- Priority: Medium
- Category: Application Error

3. Reported Problem

The internal reporting application closed unexpectedly when the user attempted to generate a report.

4. Investigation

- Verified the reported application issue.
- Reviewed the application log.
- Identified repeated ERROR entries during report generation.
- Found that the report configuration file was not found.
- No evidence of a system-wide failure was identified.

5. Log Evidence

The application log recorded a missing report configuration file, followed by report-generation failure and application termination.

6. Root Cause

The application could not locate its required report configuration file, preventing the report-generation module from completing successfully.

7. Corrective Action

- Created the required configuration directory in the controlled environment.
- Restored a valid report configuration file.
- Verified the required configuration values.

8. Verification

- Confirmed that the configuration file exists.
- Verified the required configuration parameters.
- Confirmed that the application configuration was available for report generation.

9. User Communication

The user was informed that the application configuration issue had been addressed and the ticket was resolved.

10. Lessons Learned

- Application logs provide valuable troubleshooting evidence.
- Configuration files should be monitored and protected.
- Changes should be controlled, documented, and verified.

11. Ticket Closure

The incident was resolved after restoring and verifying the required application configuration.
